

Euro Attractions Show 2008 /LTC celebrates 21 years exhibiting at industry expo

LTC commemorated 21 years as a limited company by exhibiting at the Euro Attraction Show (EAS) 2008.

The annual event, held in Munich, was the perfect event, not only to celebrate LTC's 21st birthday in style, but also to showcase its expanding range of services and engineering team.

LTC are well represented at many of the industry trade fairs worldwide, but this was the first time the company decided to 'take the plunge' and exhibit.

The stand and displays attracted many visitors from all over Europe and further afield.

The trade show also offered the opportunity to contribute to a number of the international and European seminars, including the latest research on passenger acceleration and the collaboration on the intended revision of the current European standard for fairground safety.

LTC are looking ahead to exhibiting at more expos internationally in the future.

Work begins on new premises

Building work has started on LTC's new premises in Hyde, Manchester.

The premises, a converted pub previously known as *The Commercial*, will undergo a thorough refurbishment, and is planned to complete in spring 2009.

The building offers significantly more office space and promises to cater for LTC's growing team, as well as provide a new, larger standards library, document archive and high-speed broadband internet server.

Bob Nicholls, LTC Managing Director has explained the move will enable the company to further improve service to clients, with increased resources and better communications. The move to larger premises also allows LTC to expand in response to

amusement device inspection, as more nations adopt stricter safety standards.

The new office is also well linked with major routes, the rail network and Manchester Airport, to enable easy and quick travel to and from the office.

LTC's future office provides improvements, not only in equipment and resources, but in office design, with brand new meeting rooms, staff facilities, and specific offices for LTC team sub-groups, such as health and safety and standards documentation..

For more news and pictures of the transformation into our future office space, visit online soon, or look out in next quarter's newsletter....

LTC online forum is a big hit

LTC's online technical forum has been receiving considerable interest since it was launched in October.

Users have been registering onto the forum, which allows LTC inspection engineers and clients to share news, views and information.

Ian Davies, LTC inspection engineer and webmaster commented "we're very pleased with the forum. It has given our customers more accessibility and ourselves more efficiency in sharing information, including

photos, accident news and technical bulletins".

The forum also allows LTC team members to communicate news and information in response to client's needs, as well as send registered users notification when news items such as breaking industry accidents, or new technical updates from manufacturers.

With over sixty users already logged on, it's already a huge success. If you haven't logged on to the forum yet, sign up from www.ltc.co.uk and follow the link to the Technical Forum...
